

# INVENTORY BLOWOUT

## ANTI-SLIP

**Anti-slip is an exciting, environmentally safe volcanic aggregate product, which acts as a non-slip agent on ice.**

**Anti-Slip™** replaces salt, sand and chemical de-icers to **significantly reduce environmental damage** to expensive landscapes, trees and shrubs, decorative walkways, lawns, floors, carpets, metal, as well as concrete sidewalks, driveways, garages, on loading ramps and in industrial shops.

**Anti-Slip™** is ideal for traction in environmentally sensitive locations such as: areas draining into sources of drinking water (well water), wetlands, fish and wildlife habitats, nurseries, orchards and farms. No gloves or special handling equipment is required to apply it; a little goes a long way, as the edges of the pumice resist rounding to provide traction day after day. The natural black colour of the pumice heats up with sunlight to enhance melting.

Of Canadian origin, **Anti-Slip™** contains no added chemicals. It is the same volcanic aggregate (black pumice) used in landscaping, green houses, hydroponics, house plants, aquariums, sports fields, and construction.

Used by schools, hospitals, municipalities, property managers and homeowners in Western Canada for over 10 years, **Anti-Slip™** is now available in a **16 kg bag** from warehouses located throughout Canada.
