

farm odor BOSS[®]**An
Organic
Solution****Made in** 

A solution to your farm's intensive livestock problems. Ammonia, H₂S gases, pit solids, undesired odors etc.

Manure becomes a valuable fertilizer, instead of an agricultural waste disposal problem.

CONTROL OF AMMONIA AND TANK SOLIDS (Water Line Injection Systems) Mix 570 ml or 20 oz. of Farm Odor Boss to desired mix ratio and inject into water line per 4000 L or 1000 gal of water flow. In problem systems where solids have built up, double the treatment for 2-6 weeks or until crust is dissolved and desired odor level control is achieved. Then resume normal treatment of 570 ml or 20 oz. of Farm Odor Boss per 4000 L or 1000 gal of water flow.

PITS & GUTTERS (Manual Application Process) continual use of Farm Odor Boss will control odors and make solids handling easy (in the barn as well as in the lagoon). The use of 57 ml or 2 oz. of Farm Odor Boss per 4000 L or 1000 gal of pit capacity per week will control pit gases, odors and solids problems in average situations (conditions). If however, a problem exists, the following treatment is recommended: for every 4000 L or 1000 gal of pit capacity, mix 570 ml or 20 oz. of Farm Odor Boss in water and sprinkle or inject with pressure pump onto solids. Repeat once a week for 2-6 weeks or until desired results are obtained.

BROILER BEDS or LOFTING BARN

Spray 570 ml or 20 oz. per 100 m² or 900 sq. ft. twice a week until odor and toxic emanations are reduced to a desired level. Continual use of Farm Odor Boss once a week will control odors and toxic emanation

MANURE HOLDING PONDS & LAGOONS

Spray or inject 1350 ml or 48 oz. of Farm Odor Boss per 100 m² or 900 sq. ft. of surface once a week until crust is dissolved and desired odor level is achieved.

WASH DOWNS

Trucks, barns, crates, work clothes, etc. Add 570 ml or 20 oz. per 1000 L or 250 gal of water flow. Soak down walls, crates etc. and let stand for 1/2 hour and wash down. Repeat again to prevent manure from sticking to pens and walls. For your work clothes, add 50-75 ml per load of wash.
